like [u] field ", " induction ", " organizer ", and others of like nature, and thus deal with entities and relations of " organismic " order.* He adds : [c] Development is not simply a unitary process, but rather a complex of relatively independent (but not unrelated) component processes* which can., to a large extent, be experimentally isolated and cannot be reduced to the same terms.'

We niay well ask: Are not these ' entities and relations of organismic order * of somewhat questionable if not frankly fictitious status ?
